

Global statement: Stop facial recognition surveillance now!

We have a range of concerns about facial recognition surveillance, ranging from serious concerns about its incompatibility with human rights, to the potential for discriminatory impact, the lack of safeguards, the lack of an evidence base, an unproven case of necessity or proportionality, the lack of a sufficient legal basis, the lack of legislative oversight, and the lack of a democratic mandate.

All of these views lead us to the same conclusion: **180 experts call on police, other state authorities and private companies to immediately stop using facial recognition for the surveillance of publicly-accessible spaces and for the surveillance of people in migration or asylum contexts.**

The signatories to this call are civil society organisations and individual experts (including researchers, academics and advisors in technology, privacy, data protection and human rights, lawyers and other professionals).

This letter remains open for additional individual and organisation signatures. To add your signature, go to: <https://tinyurl.com/stop-facial-rec-signature>.
